

Welcome to the team as

Junior Infrastructure Analyst (m/f/d)

in Frankfurt

Task

As a Junior Infrastructure Analyst in the CI-CD & Agile QA cluster, you will be involved in setting up, developing and supporting software processes within Commerzbank's Continuous Delivery and Continuous Integration systems. You will actively participate in the implementation and optimization of an end-to-end deployment management system and support the operation and optimization of a deployment management system in a decentralized environment. The collaboration is based on agile methods and consists of a team of business analysts, software architects, scrum masters and other specialists with different backgrounds. With your willingness to learn new topics and your mindset, using the most modern technologies, you support the change to a digital technology company.

Profile

- Degree in computer science, business informatics, natural sciences or comparable qualification
- Very good analytical and conceptual skills and willingness to learn new topics
- Very good knowledge of Unix for systems- and applications analysis, as well as with Unix (bash) Scripting and Python
- Good knowledge in the area of operations and support with focus on Java-based applications, infrastructure and DevOps
- Good knowledge of modern operation and development architectures (microservices, self-containing and auto-healing-systems, cloud infrastructure)
- Very good command of written and spoken German and English
